

STARFLEET COMMAND **DECLASSIFIED** BLUEPRINTS DVD

This DVD omits the COMMERCIAL Original Star Trek Blueprints, Star Trek the Motion Picture Blueprints, and Star Trek The Next Generation Blueprints; however there are other better blueprints that cover the same ships etc. These Blueprints have been sold at Conventions until Paramount forbid the Sale. They are now being sold on eBay for \$4.99 - \$9.99 plus postage per Single Set. A lot of time went into this compilation, 4 Years.

200 Sets/Folders 6,050+ Blueprints DVD (No Zips) Easy Auto Play Menu

Each folder contains an Image or Cover (file 1.jpg) This is used in WindowsXP as the Identifying thumbnail view of the Folder it is in. On a DVD this thumbnail is not visible.

Note: Although there are duplicate Blueprints they are by different designers.

Sets/Folders/Contents:

Enterprise D Plans by Ed Whitefire*

The True Story of "The Star Trek TNG Blueprints".

The first new TV series to bear the name "Star Trek", after the original show was canceled, would be "Star Trek the Next Generation". Set 90 years after the era of the original show, this new series would follow the exploits of an all-new crew who explored the galaxy in an all-new "Enterprise", the Enterprise "D". This new ship would be known as the "Galaxy Class" starship and for the first time would include among its compliment families and children. The ship had a crew roughly five times that of the original Enterprise but there was room onboard for plenty more. This ship would also feature for the first time specialized decks that could be configured to the preferred environment of nearly any species that needed to travel onboard her.

The ship was designed by Andy Probert who would also work with Ed Whitefire on the original set of interior plans for the "D", which are presented here for the first time anywhere. Andy had worked his way up the ranks of the Star Trek Art Department, beginning with "Star Trek the Motion Picture" where he was responsible for the design of many of the auxiliary craft seen in that film. The culmination of his work there would be when he was given the chance to provide the

overall design of the new "Enterprise D". He would also be responsible for supervising the production of the commercial model kit made of this ship.

Phil Broad: "It was sometime during the first season of Next Generation's run on TV that I mentioned in passing to Ed that "someone" should see about doing plans of the new Enterprise, like the old Franz Joseph deck plans of the ship from the original series. Ed replied "that gives me an idea" and the rest is history."

Ed contacted Paramount Studios and eventually came in contact with Star Trek Art Department staff member Andrew Probert who listened to his idea. Andrew thought it was good and they agreed that Ed should do the "official" plans for eventual publication. It would be up to Ed to not only create the drawings but to find a publisher as well. This would prove to be no small task, the drawings would take two years of effort to design and draw and the search for publishers was not easy either. In the end the gaming publisher "FASA" was given the contract to publish and distribute the plans under their existing license with Paramount for Star Trek related products.

As Ed got going on the project some of his original pencil layouts would be displayed at the last "Equicon" science fiction convention held in Los Angeles and interest from the fans seemed reasonably high. After two years of effort and uncounted trips to the studio to confer with Andrew Probert, Rick Sternbach and Mike Okuda, the plans were finally ready for publishing. Ed had them duly copyrighted and all seemed well.

It was at this point that fate intervened when it was learned that FASA had let their license with Paramount expire and they could no longer publish the plans. Ed began to cast about for a new publishing house and it was during this process that he learned that Rick Sternbach had agreed to the Pocket Book offer to produce plans of the ship. Ed now had to watch as all his work was cast aside so someone else could publish the "official" plans. There proved to be little that Ed could do to stop the other project as by this time his friend Andrew Probert had left the Star Trek Art Department.

The new plans seemed to borrow heavily from Ed's work yet did not incorporate many of the design features that the ship's original designer Andrew Probert had intended. Only Ed's drawings do that.
